

What Is DevOps
History of Devops
DevOps definition
DevOps Main Objectives
DevOps and Software Development Life Cycle
Waterfall Model
Agile Model
Continuous Integration & Deployment (CI/CD) Jenkins
Containers and Virtual Development
Docker
Kubernetes
Azure
Vagrant
Configuration Management Tools
Ansible
Linux Basics& Administration
Linux OS Introduction
Importance of Linux in DevOps
Linux Basic Command Utilities
Linux Administration
Environment Variables
Networking
RPM and YUM Installation
Version Control Systems GIT
GIT Features
GIT – Clone /Commit / Push
GIT Hub Projects
GIT Hub Management
GIT Rebase & Merge
GIT Clone, Fetch , Pull
Build Tools – Maven
Maven Installation
Maven Build requirements
Maven POM Builds (pom.xml)
Group ID, Artifact ID, Snapshot
Maven Dependencies
Maven Plugins
CI/CD – Jenkins
Introduction to Jenkins
Continuous Integration with Jenkins
Configure Jenkins
Jenkins Management
Scheduling build Jobs
POLL SCM
Build Periodically
Support for the GIT version control System
Jenkins Build Pipe Line
Parent and Child Builds
Sequential Builds
Jenkins Master & Slave Node Configuration

Jenkins Workspace Management
Securing Jenkins
Authentication
Authorization
Confidentiality
Creating Users
Jenkins Plugins
Installing Jenkins Plugins
NEXUS
Sonatype nexus download
Nexus Configuration
Repository Maintenance
Nexus user management
Amazon Web Services
Subscription to AWS
Introduction to the AWS Management Console
Why AWS Cloud?
EC2 Essentials & Create EC2 Instances
Security Groups
Key Pairs (Public Key, Private Keys)
Elastic Compute Cloud (EC2)
Regions and Availability Zones
Amazon Machine Images (AMI)
Working with AMIs
EC2 Reserved Instance Market Place
EC2 Instance Creation
Building an Instance
Different types of Instances
Security with Key pair
Different IPs assign to EC2 Instance
Elastic IP Address
Login access to the Instance
Identity Access Management (IAM)
Creation of Users Accounts
Roles in IAM
Groups in IAM
Account Settings
Creating Permissions for Users
Deleting Permissions for Users
Accounting Settings
Elastic Load Balancer
What is Elastic Load Balancing?
How Elastic Load Balancing Works
Creating Load Balancer
Load Balancing Protocols
Attach & Detach Subnets
Attach & Detach Subnets
Monitoring and Logging
Auto Scaling
What is Auto Scaling?

- Auto Scaling Components
- Advantages of Auto Scaling
- Auto Scaling Groups (ASG)
- Attach and Detach EC2 Instances in ASG
- Monitoring Auto Scaling Instances
- Health Checks
- Cloud Watch
- Monitor AWS servers
- Simple Storage Services (S3)
- Creating and Deleting Buckets
- Adding Objects to Buckets
- Deleting Objects
- Uses of S3 storage
- Notifications
- Uses of S3 storage
- Integration with Jenkins
- Elastic Block Storage (EBS)
- EBS Volume Types
- EBS Performances
- Instance Store Volumes
- Optimizing Disk Performance
- Creating and Deleting Volumes
- Attach and Detach Volumes
- Mount and Un-mounting Volumes
- Relational Database Services (RDS)
- Data Base Instances
- Data Base Engine
- Creating Data Base
- Working with Storage Types
- Beanstalk
- Setup automated deployments
- VPC
- Creating a Custom VPC
- Security Groups
- Creating Identity Gate Way (IGW)
- Connecting Instances in the Gateway/li>
- Subnets
- Route Tables
- VPN Components
- Route 53
- Configuring Amazon Route 53
- Public Hosted Zones
- Private Hosted Zones
- AMI (Amazon Machine Image)
- Using an AMI
- Creating your own AMI
- Deregistering your AMI
- Cloud Trail
- Setting Up Servers & Load Balancer
- Apache Web Server

Web Server Installation & Configuration/li>
Apache Tomcat Server
Tomcat Server Installation & Configuration
Manual and Automated Application deployment
HA Proxy Installation
Backend Servers & Ports
Load Balancing Algorithm
Shell Scripting
Ansible
Introduction to Ansible
Ansible Server Configuration
Infrastructure Management
SSH Connection in Ansible Master
YAML Scripts
Host Inventory
Hosts and Groups
Host Variables
Group Variables
Host and Group Specific Data
Ad-hoc Commands
Playbooks
Variables
Conditionals
Handlers
Templates
Modules
Core Modules
Extra Modules
Ansible Roles
Identify server roles
Roles structure
Creating, Managing executing roles
Chef
Introduction to Chef& Chef Master
Installation of Chef DK and Nodes
Configuration of Chef DK and Master
Knife utility
Chef Repository
Workstation setup
How to configure knife
Workstation Installation
Connection between knife and Master
Organization Setup
Create an Organization
Add User & Node to an Organization
Node Setup
Create a Server & add to Organization
Cookbooks creation
Check node details using knife
Node Objects

How to add Run list to Nodes
Check node details
Managing Multiple Nodes
Roles and Environments
Chef Data Bags
Chef Market Place
Puppet
Introduction to Puppet
Installation of Puppet Master
Installation of Puppet Agent
Parameters in Puppet.conf
Managing Manifests
Creating Manifests
Node Definitions
Managing Files Puppet DSL
Adding Class to the Node definition
Variables
Inheritance
Templates (.erb)
Puppet Node Definition
Puppet Forge Modules
Creating and Managing Modules
Module Structure
Creating Node Definitions
Installing Web Servers
Installing App Servers
Installing DB Server
Roles and Profiles
Vagrant
Introduction to Vagrant
Setting Up Vagrant
Virtual Box Installation
Vagrant Installation
Vagrant Machines
Vagrant File
Vagrant Boxes
Environment Management
Networking Basics
Private Network
Public Network
Network Adapters
Docker
How to get Docker Image?
What is Docker Image
Docker Installation
Working with Docker Containers
Docker Engine
Creating Containers with an Image
Working with Images
Docker Command Line Interface

Docker Compose

Docker Hub

Docker Trusted Registry

Docker swarm

Docker attach

Highlights of The Course:

Real time faculty

Daily tasks and follow-up provided Timely completion of course

Real time work flow & scenarios

AWS – 13 modules covered

Linux Basics & Administration Covered

Live project at end of the course
